

# SUBLIFLOCK

SubliFlock is a flock material with 0.5mm polyester flock fibers that can be printed with sublimation inks.

## ADVICES

### Can I do Print & Cut with SubliFlock ?

Yes, you can print directly with Sublimation inks on SubliFlock and cut in the same time. But you'll have to be aware a bleeding of the excess ink is possible prior to the first wash [i.e. in rainy conditions]. With this process, the textiles should be washed prior to wearing. The excess ink is removed without loss of color brilliance, and without soiling the textile, during the first wash. Due to the higher surface direct printing on FiberPlus doesn't work.

## FEATURES

- > Waterbased PU
- > Thickness: 600 $\mu$
- > Fastness: 60°C
- > Printable with Sublimation
- > Transfer Temperature: 160-170°C (240°F)
- > Transfer Time: 15-17 seconds
- > Pressure: Medium

SUITABLE FOR STANDARD TEXTILES

## PACKAGING

50 cm (19,7")

10 meters (10,9 yd)

50 sheets (A4)  
50 sheets (A3)
