

Custom Mask Shapes in 2022 SpaceControl Versions

The new upgraded SpaceControl Versions include a Pattern Print Feature that allows you to print Images 'rasterised' into different Shapes. When 'Pattern Print' is selected the Image will be printed in the chosen Mask Shape, Size, Gap and Angle. Shapes can be sized, either proportional or non-proportional, Gaps between the Shapes can be defined and the Screen Angle can be either 0 or 45 degrees. By default Ellipse/Round, Heart, Rectangle/Square and Star Shapes are included. Custom Shapes can be ordered and added to the Mask Shape selection. Requests for custom mask shapes should be submitted as a vector file in Adobe Illustrator AI V8 format or earlier.
